

# Feasibility Study

The main aim of this feasibility study is to decide whether the proposed project is Usable or not. We have a defined client from HCL.

In this Feasibility Study, it concentrates mainly on three areas:

- 1) Operational Feasibility
- 2) Technical Feasibility
- 3) Economic Feasibility

- **Operational Feasibility:**

It tests the operational scope of software that has to be developed. The proposed product should have high Operational Feasibility. Considering all the Factors we decide that the proposed project is highly usable in daily life.

- **Technical Feasibility:**

It compares the level of technology that is present practically for development of that product to the level of available technology with us.

**Technology that we are going to use:**

HTML

CSS

Bootstrap

These are for front-end

My SQL

PHP

These are used for backend

Server software configuration:

Operating system: windows 7 and above

Android: kit-Kat and above version

IOS

- **Economic Feasibility:**

This Proposed project gives high economic benefits on ratio to the investment, as most of the companies need our project. It reduces the cost by reducing man power and work load
